What is I N T E R N E T ?

- The largest network of networks in the world.

What is I N T E R N E T ?

- It can also be defined as a means of connecting a computer to any other computer anywhere in the world via dedicated routers and servers.
- When two computers are connected over the Internet, they can send and receive all kinds of information such as text, graphics, voice, video, and computer programs.

What is I N T E R N E T ?

- It consists of millions of private, public, academic, business, and government networks.
- The Internet connects millions of computers. These computers are called *hosts*.
- The communication protocol used for Internet is TCP/IP.

What is TCP/IP.

- TCP/IP stands for Transmission Control **Protocol**/Internet **Protocol**, is a communication **protocols** used to interconnect network devices on the internet.

What is IP address?

- The Internet Protocol (IP) is the protocol by which data is sent from one computer to another on the Internet.
- Each computer (known as a host) on the Internet has at least one IP address that uniquely identifies it from all other computers on the Internet.

Characteristic of an internet

- i. Internet is a world-wide / global system of interconnected computer networks.
- ii. Internet uses the standard Internet Protocol (TCP/IP)
- iii. Every computer in internet is identified by a unique public IP address.

Characteristic of an internet

- iv. IP Address is a unique set of numbers (such as 142.4.4.174) which identifies a computer's location. The given IP address is for **http://www.irdp.ac.tz**
- v. A special computer DNS (Domain Name Server) is used to give name to the IP Address so that user can locate a computer by a name.

What are the uses of Internet

- Communication
- Information and knowledge Sharing
- Digital Maps with directions.
- Social Networking
- Photo sharing
- Video sharing made easy on YouTube and other media

- Hungry : order food online
- Shopping :order online
- Groceries : order online
- Want medicines :order online
- Have to go somewhere: Book Taxi Online
- Have to pay someone : Use Online modes

- Train and flight Ticket: Book tickets online
- Filling Form online through internet
- Checking Result through internet.
- Online banking
- Mobile balance running low : Fill balance through online modes
- Pay electricity bill online

What is a Web browser

- Short for ***web browser***, a *browser* is a software application used to locate, retrieve and display content on the World Wide Web, including webpages, images, video and other files.

Examples

- Google Chrome,
- Internet Explorer,
- Safari,
- and Mozilla Firefox.

URLs .

- Each website has a unique address, called a URL (short for Uniform Resource Locator). It's like a street address that tells your browser where to go on the Internet.
- When you type a URL into the browser's address bar and press Enter on your keyboard, the browser will load the page associated with that URL.

Basic URL structure

What is HTTP?

- **HTTP** (Hypertext Transfer Protocol) is the set of rules for transferring files (text, graphic images, sound, video, and other files) on the World Wide Web

What is a Domain Name?

- Domain names are easy-to-remember words that we can use to communicate to a DNS server the website we want to visit.

- The domain name system gives every server a memorable and easy-to-spell address, such as *lifewire.com*. The domain name hides the IP address that most people aren't interested in seeing or using, like the *151.101.129.121* address used by *lifewire.com*.

Examples of domain names.

- **.com = company such as Amazon.com**
- **.org = organization such as cancer.org**
- **.gov = government such as texas.gov**
- **.edu = educational institutions such as utexas.edu**

What is www(world wide web)

- Also called the web, is a collection of internet resources , hyperlinked text, audio, and video and files that can be accessed and searched by browsers based on standards such as HTTP and TCP/IP

What is Web 2.

- **Web 2.0** is the name used to describe the second generation of the world wide **web**, where it moved static HTML pages to a more interactive and dynamic **web** experience.

What is a web page?

- A **web page** or **webpage** is a document that is accessible through the Internet or other networks using an Internet browser.
- A web page is accessed by entering a URL address and may contain text, graphics, and hyperlinks to other web pages and files.

What is a Website?

- A **site** or **website** is a central location of various web pages that are all related and can be accessed by visiting the home page of the website using a browser.
- For example, the Computer Hope website address URL (Uniform Resource Locator) is <https://www.computerhope.com>.
- From our home page, you could get access to any of the web pages contained on our website.

Types of websites.

E-commerce Websites

- E-commerce is a favorite type of a website globally due to the marketing nature of it.
- Buyers meet sellers and transactions such as ordering, payments, and shipping are capable online.

Personal Websites

- These sites are ideal for individuals to help share information and photos with friends.

Political Sites

- These sites give political information like campaign information, candidate's information, political news, and blogs, etc

News Websites

- These sites give the latest news in entertainment, weather, and sports. They offer breaking news, news update concerning the country/ the world and overall global news.

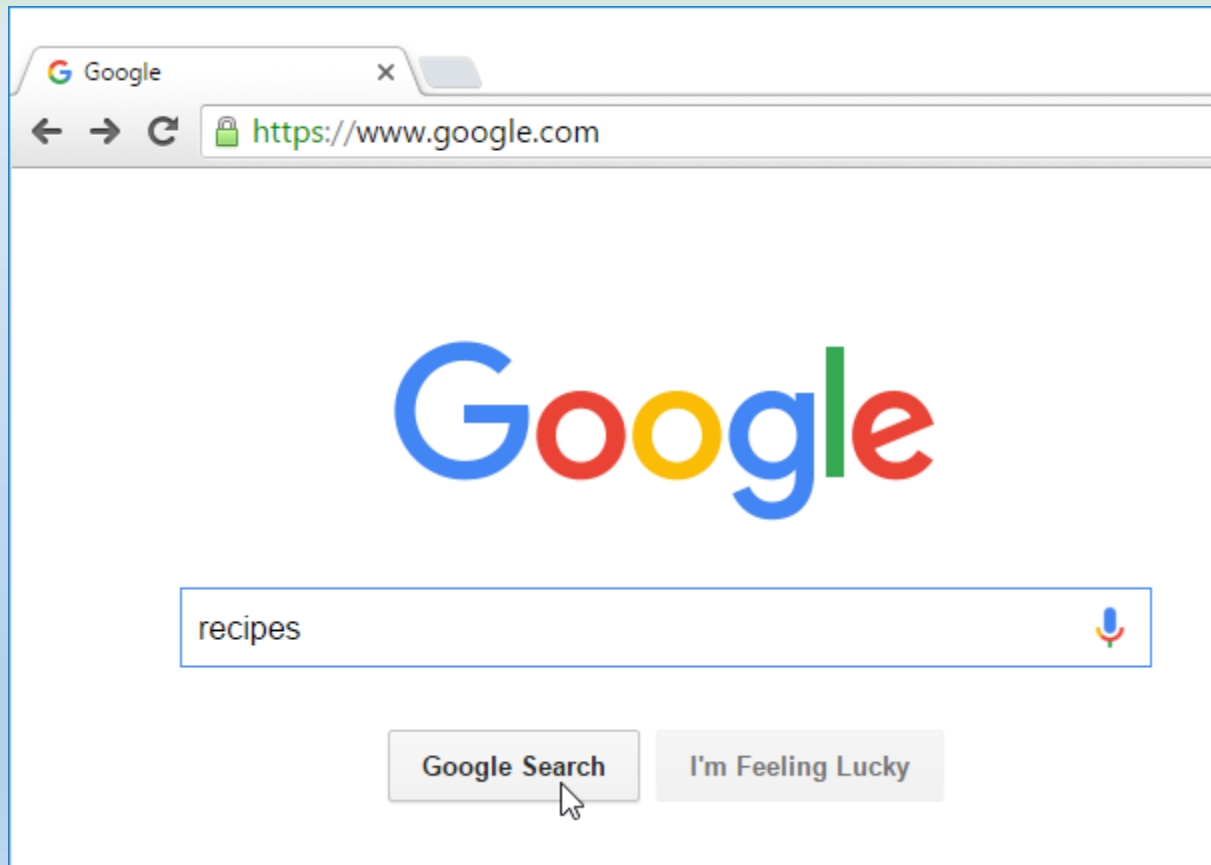

Search Engines

- A web search engine is a software system that is designed to search for information on the World Wide Web.
- With billions of websites online today, there is a lot of information on the Internet. Search engines make this information easier to find.

How to search the Web

- There are many different search engines you can use, but some of the most popular include
- Google,
- Yahoo!,
- Bing.

Example.

For example you want to search for recipe.

- After you run a search, you'll see a list of relevant websites that match your search terms.
- These are commonly known as search results.
