

Dear Editor,

We are submitting our manuscript entitled "An Explainable AI Approach for Pulmonary Edema Classification Using Chest X-Ray Using DenseNet121 with Grad-CAM" for consideration in [Journal of Electrical and Electronic Engineering].

This study presents a novel approach combining DenseNet121 (AUC = 0.917) with Grad-CAM explainability, addressing the critical need for transparent AI in medical imaging. The model was trained on 1000 chest X-rays and demonstrates high clinical potential.

We confirm that this manuscript has not been published elsewhere and is not under consideration by another journal.

Sincerely,

Boniface Ben Sankwa
